## 1 Introduction

Purpose of this document is in short to describe features delivered in the software version it refers to.

## 2 Requirements

This release supports all TDX and TDH800 hardware, except prerelease modules shipped without serial number (before 2010-12-08).

### 2.1 New features

List of new features added in release 3.3.1.35136, since last release 3.2.1.34693.

### 2.2 Backend:

- It is now possible to route a whole transponder from a frontend to a CI slot at a backend (BE). The advantage is all information is included. The drawback is no mux possibility.

### 2.3 IP-out:

- New Extended++ service list added. This service list support Panasonic TV sets service discovering. The list is accessed via URL 192.168.0.100/satip.m3u

### 2.4 DVB-C frontend:

- New DVB-C frontend support. This FE is built at Silabs chipset.

## 3 Bug fixes

List of bug fixes corrected in release 3.3.1.35136, since last release 3.2.1.34693.

### 3.1 Simulcrypt:

- If a backend in a sub-unit is restarted then will the ECM flow stop at the restarted backend. This result in descrambling is not possible at the end users STB/TV. Restart the TDX to recover; Jira-1855; Corrected
- If a service is removed from a input in the configuration then will the ECM flow stop at the backend where the removed service was broadcasted. Restart the TDX to recover; Jira-1855; Corrected
- If a license is selected several times in "Running mode" at the Scrambler setup menu in the GUI then will the number of licenses mistakenly decrease. Restart the TDX to recover; Jira-1842; Corrected

### 3.2 Scrambling:

- If a service is removed at an output via the GUI then is the service related EMM not always removed at the output; Jira-1523; Corrected

### 3.3 Backend

- Even if *Manual transportstream ID* is disabled at the *Network* menu the *transportstream ID* can be set at the *Output* menu; Jira-1901; Corrected

### **3.4 General:**

- Local\_time\_offset\_descriptor is empty when New Zealand or Finland is selected in country settings; Jira-1471; Re-open -> Re-corrected
