HotelMode Configuration HOSPITALITY MODE

First set your TV in the hotelmode.

Go to CONTROL - HOTEL OPTION - HOSPITALITY MODE and set the mode to "STANDALONE"

HotelMode Configuration NETWORK

Here you configure the network settings. The Samsung smartTV can be connected via WLAN or

WIRED.

Select //NETWORK//

NOTICE: OSD will change to UserGUI, press MENU on the remote after configuration to go back.

Select the connection typ an set the //IPADDRESS//, //NETMASK// and //GATEWAY// or //DHCP/

HotelMode Configuration WIDGET

set WIDGET MODE ON and select the SOLUTION TYPE depending on the $\ensuremath{\mathsf{TV}}$ se

ries.

SOLUTION TYP

H-BROWSER - Samsung 590er/790er

VENDOR SERVER - Samsung 690er/890er

HotelMode Configuration

set the VIRTUAL STANDBY to ON. This is important for the bootup time.

**ATTENTION! **

DO NOT USE WHEN USING SWITCHED POWER

- **ATTENTION! **
- **ATTENTION! **

VIRTUAL STANDBY is still a buggy implementation from Samsung. Please

check your TV/Environment before using this feature. Please note to have the latest FW installed.

HotelMode Configuration SERVER URL SETTING

The Server-URL-IP-Address depend on the system setup and will be given you by the responsible

projectmanager.

set the SERVER URL IP: http://setup.triax.biz:9090

After a reboot the setup screen should appear.

Two cases possible:

a) A bID is shown

- Enter Room Number and press OK

b) None bID is shown

Activate the bID via http://hsiaadmin.macnetix.com *. Press return (Page reload). If bID is shown =>

Enter Room Number and press OK.

Attention: You have to repeat this action after 7 days, if you want to register an additional tv! *HSIA --> Administration --> IPTV --> TV/Radio --> Devices . A success is marked with green colour.

With your laptop you have to be into the same subnet as with the tv. Alternatively the development can

activate the bID.
